

PCAS MRX. Zaon Flight Systems
Quick Start Guide

1. Turn the unit on by one short press of the top left button.
2. The system is now working!
3. Turn the system off by one short press of the top left button.

Other information:

- a. If the unit is inadvertently switched off in flight, **it will restart in ground mode!** To set it to flight mode the right button must be pressed upwards when the writing starts to scroll across the screen – or the aircraft must be climbed at least 200 ft.
- b. Brightness can be changed by pushing the right control to the right, such that “BRT” is showing and then blipping it up or down to modify the brightness (do not hold the control up or down as this resets the unit).
- c. Host aircraft squawk and unit battery life can be checked by pushing the right control to the left and watching the 3 different pieces of information (Squawk, ALT and battery life). The unit then automatically reverts to flight mode.
- d. All audible alerts can be muted by pressing the lower left button. A small dot will flash in the bottom right of the display to show the unit is muted.
